TO: Herminio Hernando<br>MPS Program Coordinator<br>FROM: Dr. Andrew LaManque<br>De Anza College Researcher<br>SUBJECT: Math Performance Success Program (MPS), 2002-03

## Summary

The Math Performance Success Program (MPS) is in its third year at De Anza College. The program targets students who have had a particularly challenging time in previous math course attempts and provides additional faculty, counseling and tutoring support. As outlined in Attachment 1 written by Diane Mathios in fall 2002, the program requires that students take a sequence of math courses (Math 101, 105 and Math 10) in a calendar year and requires a commitment to additional instructional time.

The results of the program are impressive. Students in the program are clearly motivated to do well, but the results seem to point to an environment conducive to learning. As outlined in Attachment 2, in 2001-02, course success rates were 30-40 percentage points higher for MPS students than students not in the program taking the same course during the same term. As will be outlined below, these success rates have continued with the 2002-03 academic year.

The high success rates for program participants are accompanied by additional costs to the institution. A full assessment of the program would compare the marginal cost of additional student success and learning for the MPS program with the cost for non-MPS sections of the same course. Such an assessment should be conducted under the direction of program faculty to determine if there are aspects of the program that can be replicated for additional students.

## Enrollment in 2002-03

The MPS program ran two sections each term in 2002-03. Figure 1 below identifies the MPS sections.

Figure 1

| Term | Course | MPS Sections |
| :--- | :--- | :--- |
| Fall 2002 | Math 101 | 10 and 13 |
| Winter 2003 | Math 105 | 15 and 17 |
| Spring 2003 | Math 10 | 13 and 15 |

As outlined in Figure 2, 52-64 students enrolled in MPS math courses during the three terms, and 739-807 students enrolled in other sections of the same math courses.

Figure 2

| Term | Course | \# MPS <br> Sections | \# Other <br> Sections | MPS Course <br> Enrollment | Other <br> Section <br> Enrollment |
| :--- | :--- | :--- | :---: | :---: | :---: |
| Fall 2002 | Math 101 | 2 | 21 |  | 52 |
| Winter 2003 | Math 105 | 2 | 23 |  | 55 |
| Spring 2003 | Math 10 | 2 | 21 |  | 64 |

Figure 3 lists the ethnic group percentages in each course. The MPS sections have twice as many African American and Hispanic students on a percentage basis, as compared to the non-MPS sections. Overall, about 40\% of MPS students are of Hispanic origin. For De Anza College, about 10\% of students each term identify themselves as Hispanic.

Figure 3

MPS and Non-MPS Section Student Ethnicity

## Methodology

The computation of Pass (i.e. course "success") uses the grades captured in the end of term enrollment file. Figure 4 outlines the major definitions used in the calculations. As noted in Figure 4, the pass rate for each course does not include students who dropped before receiving a grade of W .

Figure 4

## Definitions

The following definitions were used in the calculations.
The data reported is from the official end of term enrollment files.

Pass: includes grades of $A, B, C$ or $P$
Did Not Pass: $\quad D, F, N P$ or I
Withdrew: W

For the course GPA calculation, $A=4, B=3, C=2, D=1$, all other grades are coded as 0 .

Percents are based on the total grades for the class (including W's) at the end of the term. Students who drop the class before the $3^{\text {rd }}$ week are not counted.

Ethnicity- 'Under Represented' includes students who selected on the application for admission one of the following groups: African American, Filipino, Hispanic, Native American, Pacific Islander.

All other groups, including Asian, White, Other and Decline to State are listed as "All Other."

Language results are based on an application for admission question that reads:
"Primary Language: English [or] Not English."
Not English has been translated into "English Learner."
Not all students answer this question.

## Results

As graphed in Figure 5 below, for the three terms / courses combined, $89 \%$ of MPS students passed compared to $59 \%$ of non-MPS students. Similar results outlined in Attachment 3 hold for each course, with Math 101 showing the largest difference in pass rates between MPS students (90\%) and non-MPS students (49\%) in fall 2002.

Figure 5

Attachment 3 outlines additional comparisons on the program. When course grades are converted to numerical scores, the average course grades for the two groups are statistically different, with MPS students scoring higher grades on average.

The difference in program results holds across ethnicity. However, further analysis reveals that African American student success as a group lags behind that of Hispanic students. For example, while $95 \%$ of Hispanic students passed Math 101, only $60 \%$ of African American students passed. The African American numbers are small: Only 5 students were enrolled in the MPS Math 101 in fall 2002, and the success rate is still well above the rate for non-MPS students (35\% in Math 101, fall 2002) but the difference suggests further tracking is warranted.

In Math 101 and Math 10, male students in the MPS program had higher pass rates than female students ( $94 \%$ versus $89 \%$ and $95 \%$ versus $87 \%$, respectively). This result was the opposite for non-MPS students, with female students scoring higher pass rates in Math 101 and Math 10 but not Math 105. While the number of students is small, it may warrant additional investigation into the learning / teaching styles of the participants and instructors.

Again, while the number of students in each category is small, it is interesting to note that English Learners tended to pass at higher rates than students who indicated that English was their primary language. These results held true for both MPS and nonMPS students.

## Summary

As measured by course pass rates, MPS students do better on average than students not in the program. While not measuring learning directly, this result suggests that students learn more math skills / knowledge in the MPS program than they would have otherwise. It is suggested that future assessments examine the learning that takes place in both MPS and non-MPS sections via an instrument that measures learning directly, for example, the same end of term exam given to all students passing the same course. Future work might also compare the instructional methods used in the MPS sections to those found in non-MPS sections.

Math Performance Success Program

Diane Mathios, Fall 2002
The Math Performance Success Program (MPS) offers students a team approach to success, particularly for those who have had difficulty in previous math courses. Instructors, counselors and tutor/mentors collaborate to help students complete their mathematics requirements. Students take elementary algebra in the fall, intermediate algebra in the winter, and a college-transferable math class in the spring. Two sections each quarter of MPS classes are offered.

The MPS Program serves a diverse group of students. Students are recruited from several De Anza College programs, including SLAMS, STARS, EOPS, PUENTE, DSS and EDC. In addition, the program actively seeks to include students from those groups who have traditionally had poor success in basic skills and college math courses.

Students in the MPS Program attend class for two hours of instruction. This instructional time provides both whole class activities as well as collaborative group work, with group work comprising about $50 \%$ of the instructional time. The course instructors collaborate on the instruction, using a common calendar, similar activities and common tests. Mentor/tutors are available during the class to assist students who have questions about the material.

A counselor is available for each class section. The counselor and instructor work closely to ensure student success. The counselor is available daily during class to talk to students regarding their grade to date, missing assignments and absences. In addition, the counselor provides individual and academic counseling for students in the program. The MPS team of instructors and counselors meets on a weekly basis to plan program activities and discuss concerns related to students' achievement in the class.

In addition to in-class tutoring, the program offers students group tutoring outside of class. Each week, approximately 40 hours of tutoring are offered at various times throughout the day and early evening. The tutors are trained to reinforce the methods and approach taught in the regular class. For students interested in working with other students outside of class, study groups have been formed. Whenever possible, a tutor also attends the study group to assist with student questions.

The program also arranges for guest speakers to visit the classes. These speakers have included men and women working in technical fields, motivational speakers, and informational sessions on transfer agreements to the UC or CSU system.

MPS Program team members are dedicated to the philosophy that any willing student with the proper support and services can be successful in mathematics. The MPS Program has served more than 325 students in the previous three years.
