Re: AAPI Statistics based on SARS data, winter 2016

Descriptive statistics for students who received 3SP related services through the AAPI program at De Anza College are provided in this document, based on SARS data from January 12 to March 11 of 2016. These include demographics (age, race/ethnic group and gender), first term at De Anza College, and headcount by service. Please review these figures and let me know of any issue for this will help us validate the data we will be submitting in the quarterly MIS Student Success report.

Findings

A total of 34 students received 3SP related services through AAPI during this time period, as documented by SARS. These included 20 (59%) females and 14 (41%) males; median age for all, 19 (range, 18 to 32). Data in Table 1 show that the majority of these students are Asian (53%), followed by Hispanics (35%). Table 2 shows that about 65% of the students began attending De Anza College on summer or fall of 2015. Figures in Table 3 show that the development of an education plan was the main service provided at the location--82% of student received this service, followed by obtaining information on General Education (76%), choosing classes (62%) and choosing a major (56%).
